FMP Notebooks: Educational Material for Teaching and Learning Fundamentals of Music Processing

Meinard Müller, Frank Zalkow

Overview

In this contribution, we introduce a novel collection of educational material for teaching and learning fundamentals of music processing (FMP) with a particular focus on the audio domain. This collection, referred to as FMP notebooks, covers well-established topics in Music Information Retrieval (MIR) as motivating application scenarios. The FMP notebooks provide the following:

- Introductions of MIR scenarios.
- Textbook-like explanations of central techniques and algorithms.
- Python code examples that illustrate how to implement the theory.
- Numerous illustrations and sound examples.

All components are integrated into a consistent and comprehensive framework based on Jupyter notebooks. The FMP notebooks are suited for studying the theory and practice, for generating educational material for lectures, as well as for providing baseline implementations for many MIR tasks, thus addressing students, teachers, and researchers.
