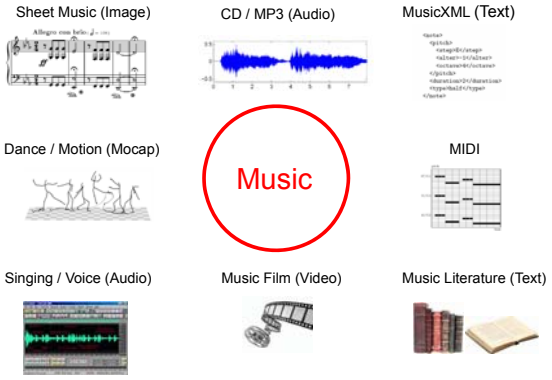
Music Representations



Research Goals

- Music Information Retrieval (MIR) → ISMIR
- Analysis of music signals
  (harmonic, melodic, rhythmic, motivic aspects)
- Design of musically relevant audio features
- Tools for multimodal search and interaction

Application: Interpretation Switcher

Music Synchronization: Audio-Audio

Two main steps:

1.) Audio features

- Robust but discriminative
- Chroma features
- Robust to variations in instrumentation, timbre, dynamics
- Correlate to harmonic progression

2.) Alignment procedure

- Deals with local and global tempo variations
- Needs to be efficient

Audio Structure Analysis

Given: CD recording

Goal: Automatic extraction of the repetitive structure
(or of the musical form)

Example: Brahms Hungarian Dance No. 5 (Ormandy)

Performance Analysis

1. Capture nuances regarding tempo, dynamics, articulation, timbre, …
2. Discover commonalities between different performances and derive general performance rules
3. Characterize the style of a specific musician (``Horowitz Factor´´)

Tempo Estimation

- Which temporal level?
- Local tempo deviations
- Sparse information
  (e.g., only note onsets available)
- Vague information
  (e.g., extracted note onsets corrupt)
