Music Structure Analysis

General goal: Divide an audio recording into temporal segments corresponding to musical parts and group these segments into musically meaningful categories.

Examples:

- Stanzas of a folk song
- Intro, verse, chorus, bridge, outro sections of a pop song
- Exposition, development, recapitulation, coda of a sonata
- Musical form ABACADA ... of a rondo

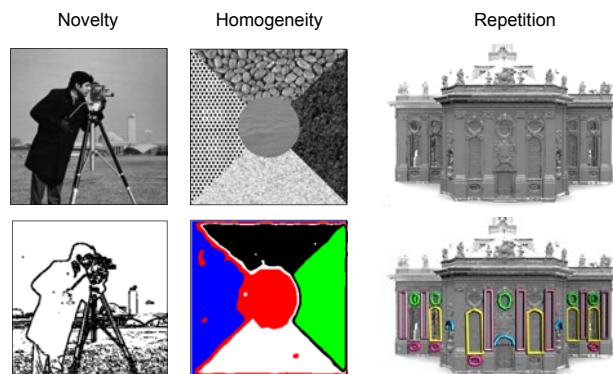

Music Structure Analysis

General goal: Divide an audio recording into temporal segments corresponding to musical parts and group these segments into musically meaningful categories.

Challenge: There are many different principles for creating relationships that form the basis for the musical structure.

- **Homogeneity:** Consistency in tempo, instrumentation, key, ...
- **Novelty:** Sudden changes, surprising elements ...
- **Repetition:** Repeating themes, motives, rhythmic patterns, ...

Feature Representation

General goal: Convert an audio recording into a mid-level representation that captures certain musical properties while suppressing other properties.

- Timbre / Instrumentation
- Tempo / Rhythm
- Pitch / Harmony

Self-Similarity Matrix (SSM)

General idea: Compare each element of the feature sequence with each other element of the feature sequence based on a suitable similarity measure.

→ Quadratic self-similarity matrix
