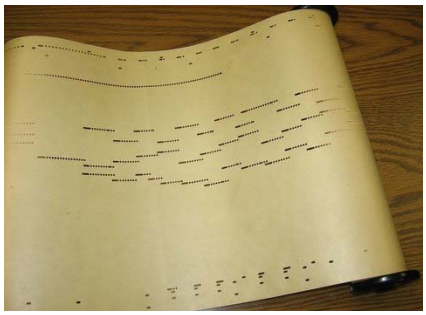
Research Goals

- Music Information Retrieval (MIR) → ISMIR
- Analysis of music signals
  (harmonic, melodic, rhythmic, motivic aspects)
- Design of musically relevant audio features
- Tools for multimodal search and interaction

Overview

Piano Roll Representation

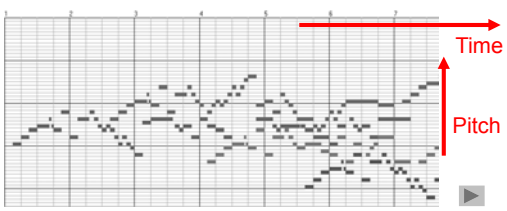


Player Piano (1900)

Piano Roll Representation (MIDI)

J.S. Bach, C-Major Fuge

(Well Tempered Piano, BWV 846)



Piano Roll Representation (MIDI)

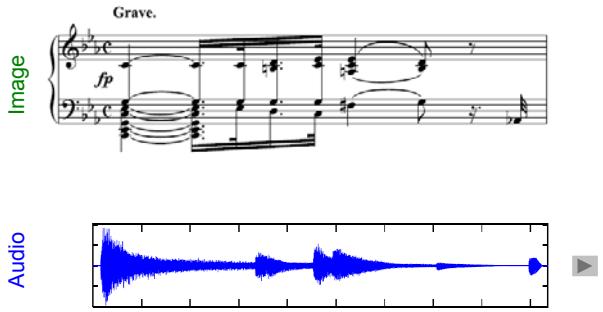
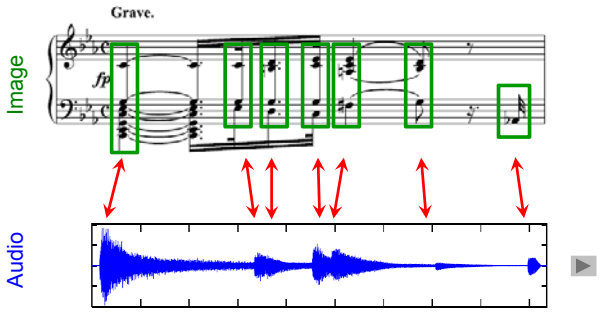
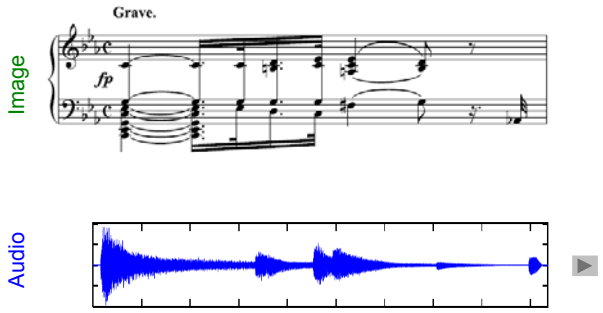
Music Synchronization: Image-Audio



Music Synchronization: Image-Audio

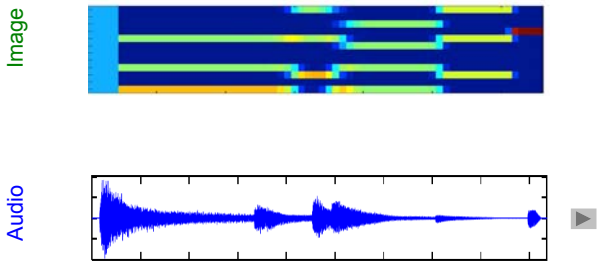


How to make the data comparable?



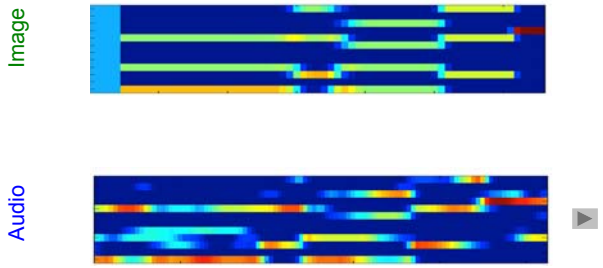
How to make the data comparable?

Image Processing: Optical Music Recognition



How to make the data comparable?

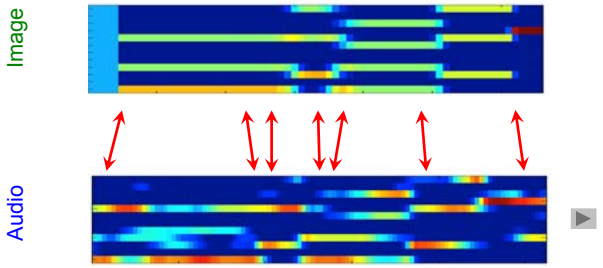
Image Processing: Optical Music Recognition



Audio Processing: Fourier Analyse

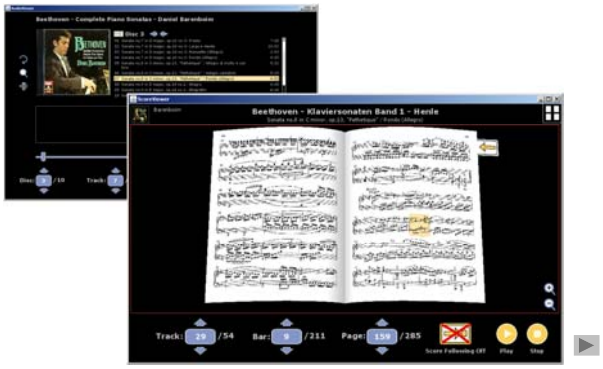
How to make the data comparable?

Image Processing: Optical Music Recognition



Audio Processing: Fourier Analyse

Application: Score Viewer



Audio Matching

Database: Audio collection containing:
- Several recordings of the same piece of music
- Different interpretations by various musicians
- Arrangements in different instrumentations

Goal: Given a short query audio fragment, find all corresponding audio fragments of similar musical content.

Notes:
- Instance of fragment-based retrieval
- Medium specificity
- A single document may contain several hits
- Cross-modal retrieval also feasible

Audio Matching

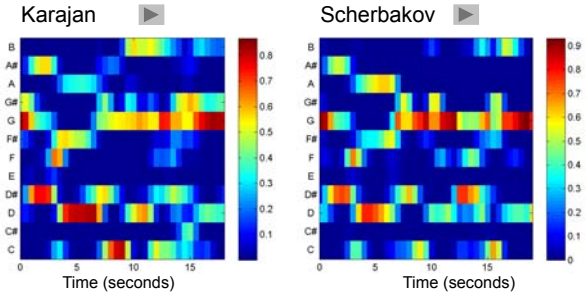
Two main ingredients:

1.) Audio features
- Robust but discriminating
- Chroma-based features
- Correlate to harmonic progression
- Robust to variations in dynamics, timbre, articulation, local tempo

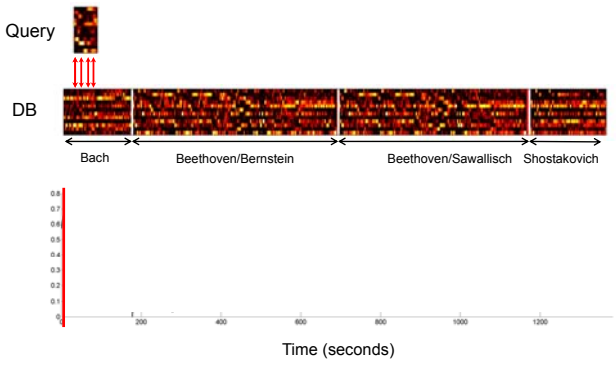
2.) Matching procedure
- Efficient
- Robust to local and global tempo variations
- Scalable using index structure

Audio Features

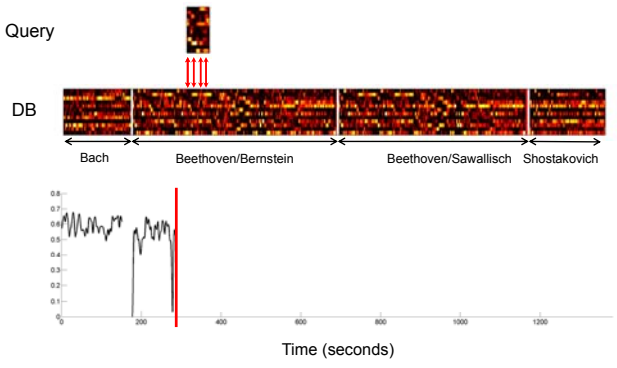
Example: Beethoven's Fifth
Chroma representation (normalized, 2 Hz)



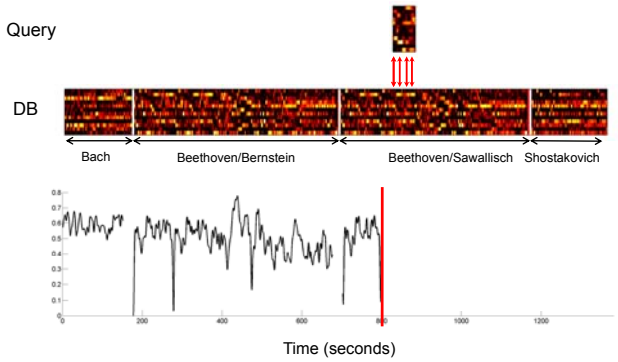
Matching Procedure



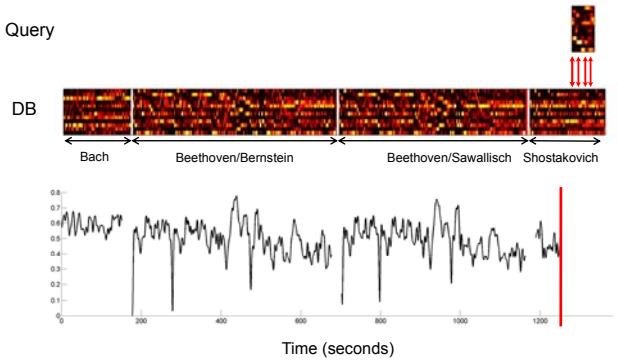
Matching Procedure



Matching Procedure



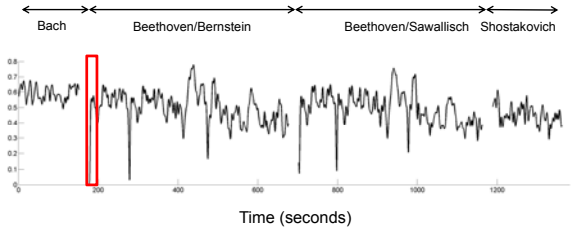
Matching Procedure



Matching Procedure

Matching curve

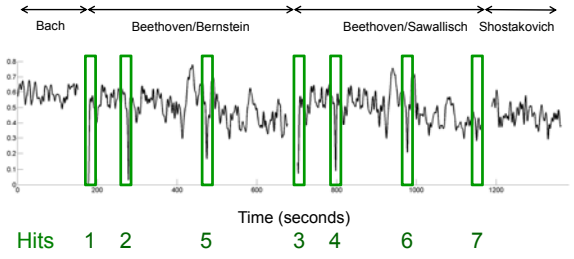
Query: Beethoven's Fifth / Bernstein (first 20 seconds)



Matching Procedure

Matching curve

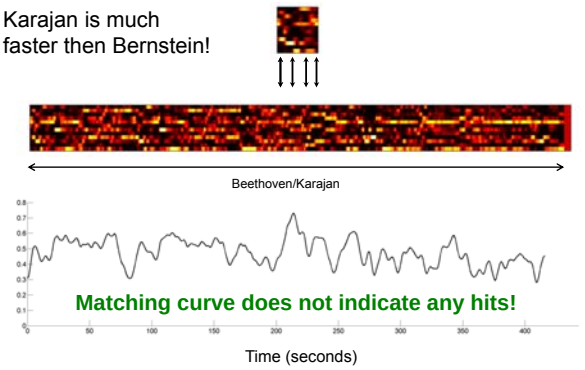
Query: Beethoven's Fifth / Bernstein (first 20 seconds)



Matching Procedure

Problem: How to deal with tempo differences?

Karajan is much faster then Bernstein!

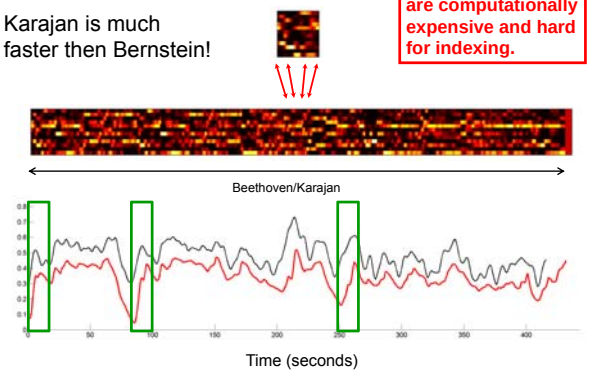


Matching Procedure

1. Strategy: Usage of local warping

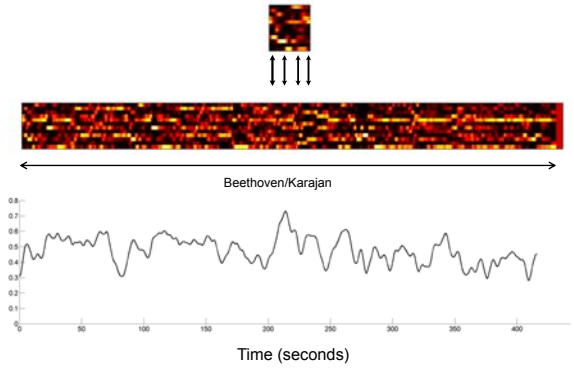
Warping strategies are computationally expensive and hard for indexing.

Karajan is much faster then Bernstein!



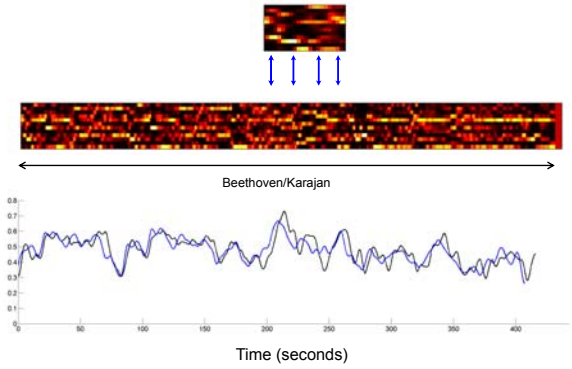
Matching Procedure

2. Strategy: Usage of multiple scaling



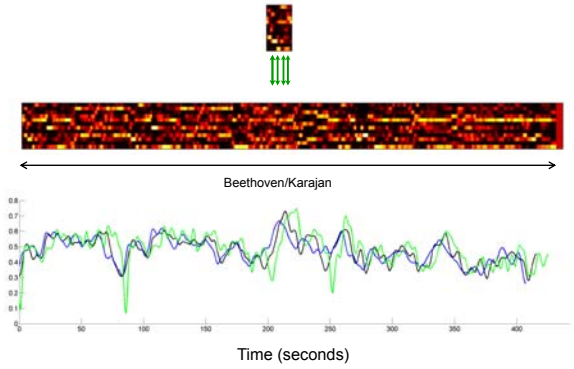
Matching Procedure

2. Strategy: Usage of multiple scaling



Matching Procedure

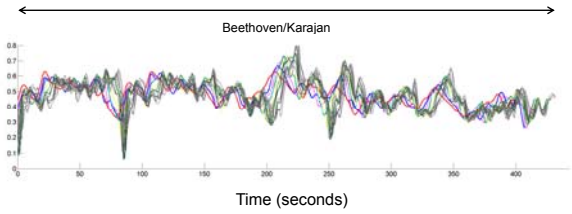
2. Strategy: Usage of multiple scaling



Matching Procedure

2. Strategy: Usage of multiple scaling

Query resampling simulates tempo changes

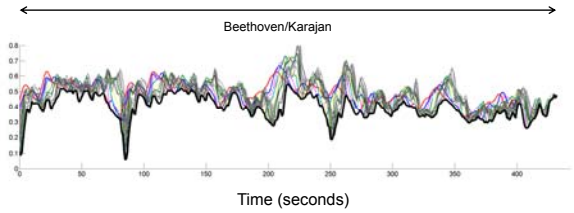


Matching Procedure

2. Strategy: Usage of multiple scaling

Query resampling simulates tempo changes

Minimize over all curves



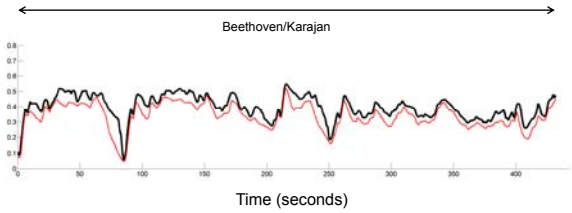
Matching Procedure

2. Strategy: Usage of multiple scaling

Query resampling simulates tempo changes

Minimize over all curves

Resulting curve is similar warping curve



Audio Matching for Feature Analysis

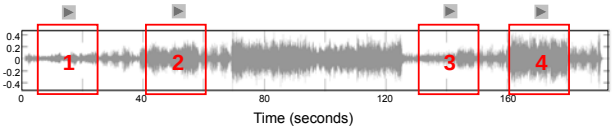
Idea:

Use “Audio Matching” for analyzing and understanding audio & feature properties:

- Relative comparison
- Compact
- Intuitive
- Quantitative evaluation

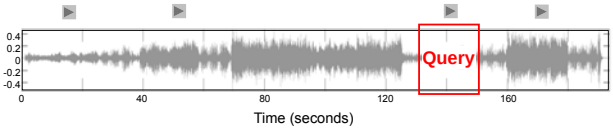
Audio Matching for Feature Analysis

Example: Shostakovich, Waltz (Yablonsky)



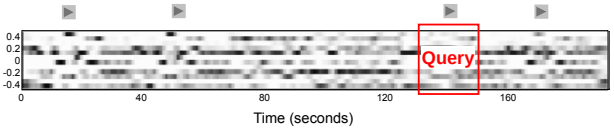
Audio Matching for Feature Analysis

Query: Shostakovich, Waltz (Yablonsky)



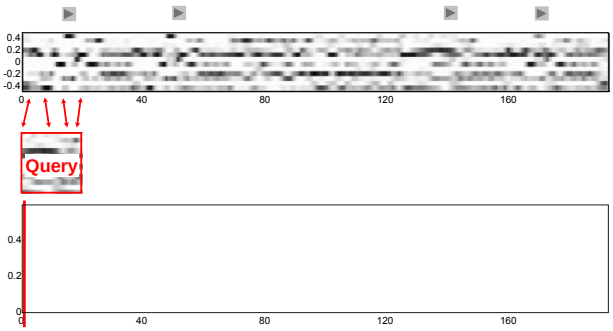
Audio Matching for Feature Analysis

Query: Shostakovich, Waltz (Yablonsky)



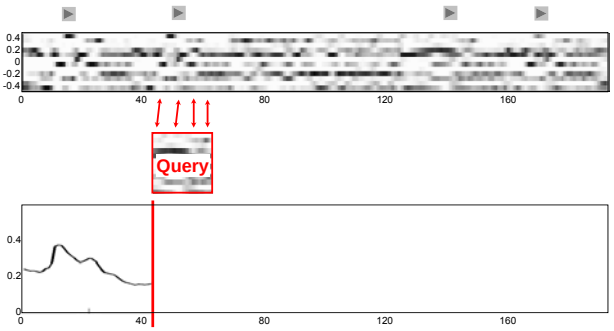
Audio Matching for Feature Analysis

Query: Shostakovich, Waltz (Yablonsky)



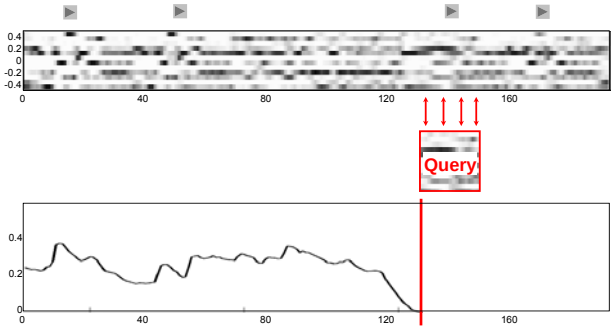
Audio Matching for Feature Analysis

Query: Shostakovich, Waltz (Yablonsky)



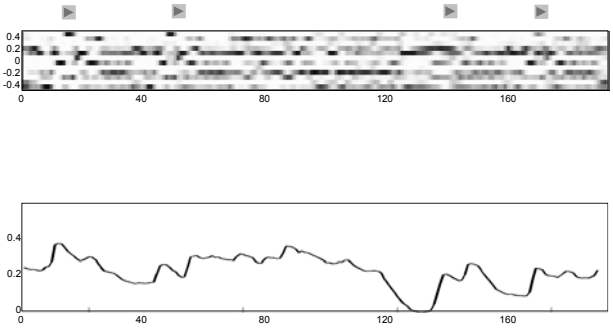
Audio Matching for Feature Analysis

Query: Shostakovich, Waltz (Yablonsky)



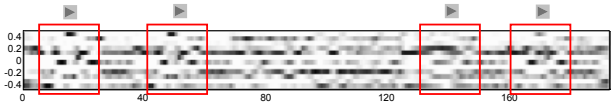
Audio Matching for Feature Analysis

Query: Shostakovich, Waltz (Yablonsky)

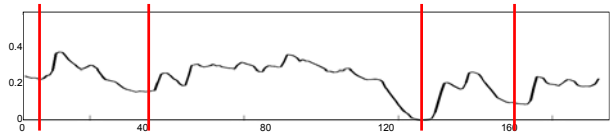


Audio Matching for Feature Analysis

Query: Shostakovich, Waltz (Yablonsky)



Expected matching positions (should have local minima)

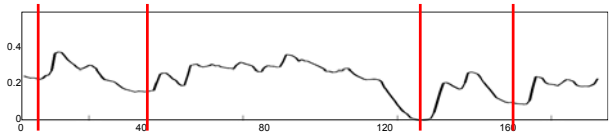


Audio Matching for Feature Analysis

Idea:

- Use matching curve for analyzing feature properties

Expected matching positions (should have local minima)

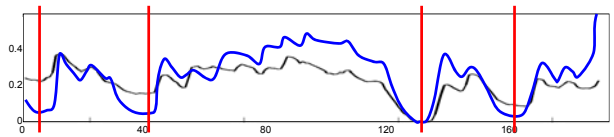


Audio Matching for Feature Analysis

Idea:

- Use matching curve for analyzing feature properties
- Example: Chroma feature of higher timbre invariance

Expected matching positions (should have local minima)

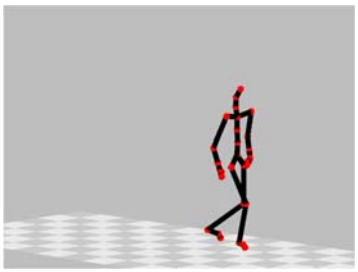


Overview

- Introduction
- Music Retrieval
- Motion Retrieval
- Music Structure Analysis
- Beat Tracking

Motion Capture Data

- 3D representations of motions
- Computer animation
- Sports
- Gait analysis

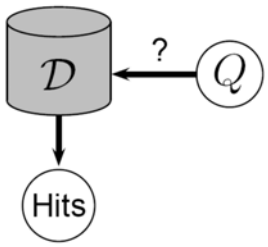


Motion Capture Data

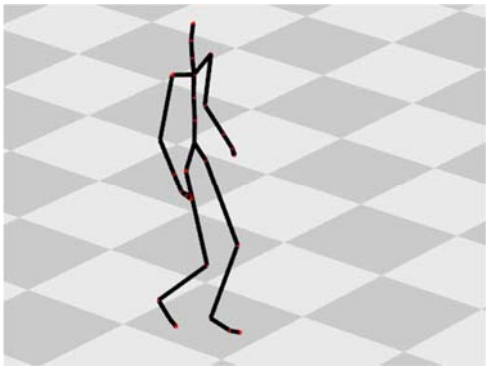
Optical System

Motion Retrieval

- $\mathcal{D}$ = MoCap database
- Q = query motion clip
- Goal: find all motion clips in $\mathcal{D}$ similar to Q

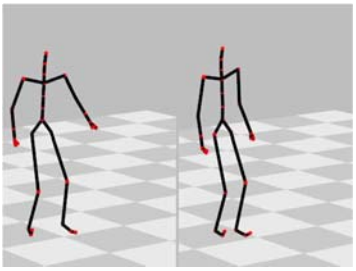


Motion Retrieval



Motion Retrieval

- Numerical similarity vs. logical similarity
- Logically related motions may exhibit significant spatio-temporal variations



Relational Features

- Exploit knowledge of kinematic chain
- Express geometric relations of body parts
- Robust to motion variations

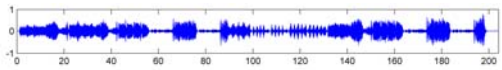
Overview

- Introduction
- Music Retrieval
- Motion Retrieval
- Music Structure Analysis
- Beat Tracking

Music Structure Analysis

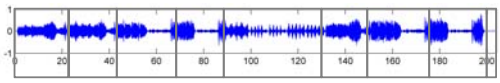
Example: Brahms Hungarian Dance No. 5 (Ormandy)



Time (seconds)

Music Structure Analysis

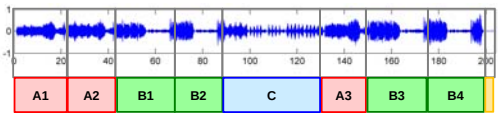
Example: Brahms Hungarian Dance No. 5 (Ormandy)



Time (seconds)

Music Structure Analysis

Example: Brahms Hungarian Dance No. 5 (Ormandy)



Music Structure Analysis

General goal: Divide an audio recording into temporal segments corresponding to musical parts and group these segments into musically meaningful categories.

Examples:

- Stanzas of a folk song
- Intro, verse, chorus, bridge, outro sections of a pop song
- Exposition, development, recapitulation, coda of a sonata
- Musical form ABACADA … of a rondo

Music Structure Analysis

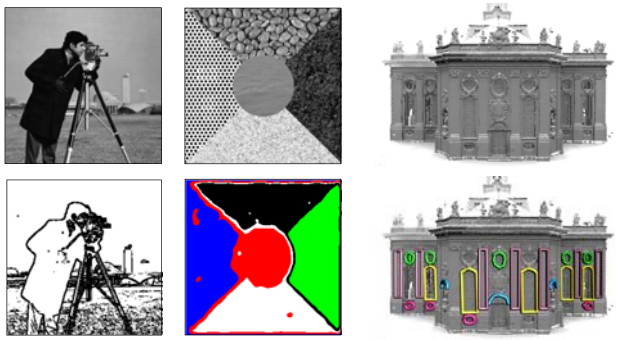
General goal: Divide an audio recording into temporal segments corresponding to musical parts and group these segments into musically meaningful categories.

Challenge: There are many different principles for creating relationships that form the basis for the musical structure.

- Homogeneity: Consistency in tempo, instrumentation, key, …
- Novelty: Sudden changes, surprising elements …
- Repetition: Repeating themes, motives, rhythmic patterns,…

Music Structure Analysis

Novelty | Homogeneity | Repetition



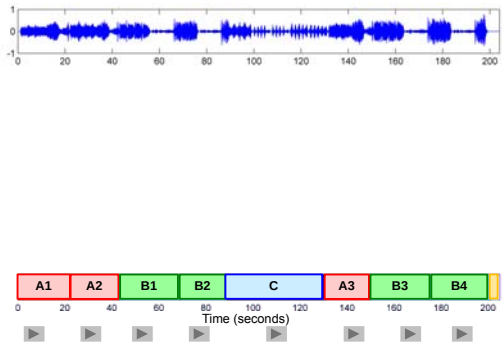
Feature Representation

General goal: Convert an audio recording into a mid-level representation that captures certain musical properties while supressing other properties.

- Timbre / Instrumentation
- Tempo / Rhythm
- Pitch / Harmony

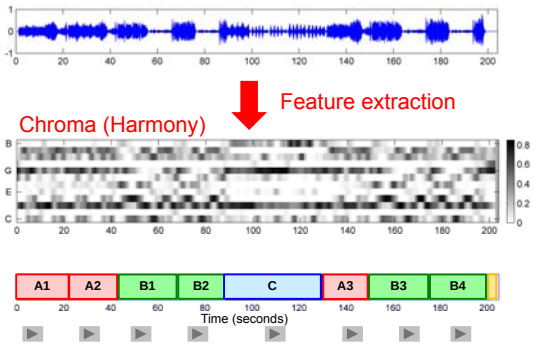
Feature Representation

Example: Brahms Hungarian Dance No. 5 (Ormandy)



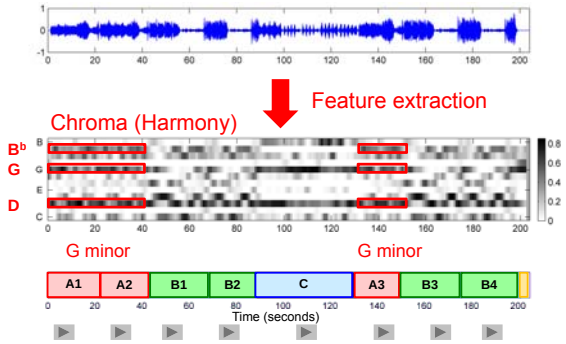
Feature Representation

Example: Brahms Hungarian Dance No. 5 (Ormandy)



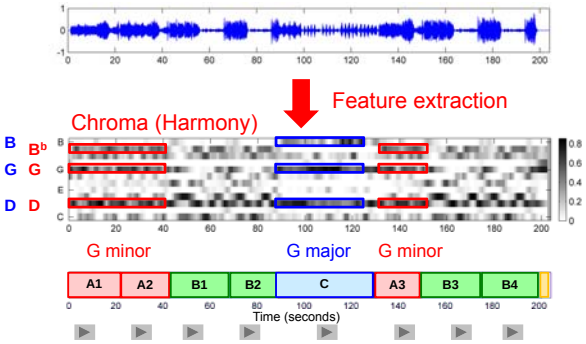
Feature Representation

Example: Brahms Hungarian Dance No. 5 (Ormandy)



Feature Representation

Example: Brahms Hungarian Dance No. 5 (Ormandy)



Self-Similarity Matrix (SSM)

General idea: Compare each element of the feature sequence with each other element of the feature sequence based on a suitable similarity measure.

→ Quadratic self-similarity matrix

Self-Similarity Matrix (SSM)

Example: Brahms Hungarian Dance No. 5 (Ormandy)

Self-Similarity Matrix (SSM)

Example: Brahms Hungarian Dance No. 5 (Ormandy)
