Local Key Estimation

Assumption: Music based on **diatonic scales**

- Heptatonic scales
- Ordering of scales according to the circle of fifths
- Each scale consists of chain of six perfect fifth
- Fifth-neighboring scales share 6 of 7 notes

Local Key Estimation

Example: J.S. Bach, Choral "Durch Dein Gefängnis" (*Johannespassion*)
Score representation (piano reduction)

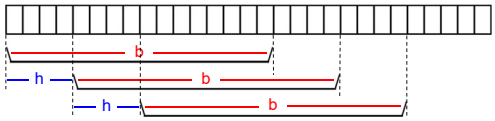
Chromagram

Local Key Estimation

Summarize pitch class (chroma) content over a certain time period

- Feature smoothing
- Parameters: blocksize b and hopsize h



Local Key Estimation

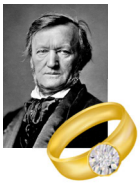
- Application to Wagner's *Ring*



Cross-Version Analysis

- 16 different versions (audio recordings)
- Measure annotations (manual for 3 versions, automatic for 13 versions)

Cross-Version Analysis

- Hypothesis:
  Harmonic characteristics should not depend on version
- Strategy:
  Use consistency of analysis results across different versions as indicator of “reliability” or “stability”
- Application:
  Visualize consistency with gray scheme
