# Chord Recognition: Label Assignment

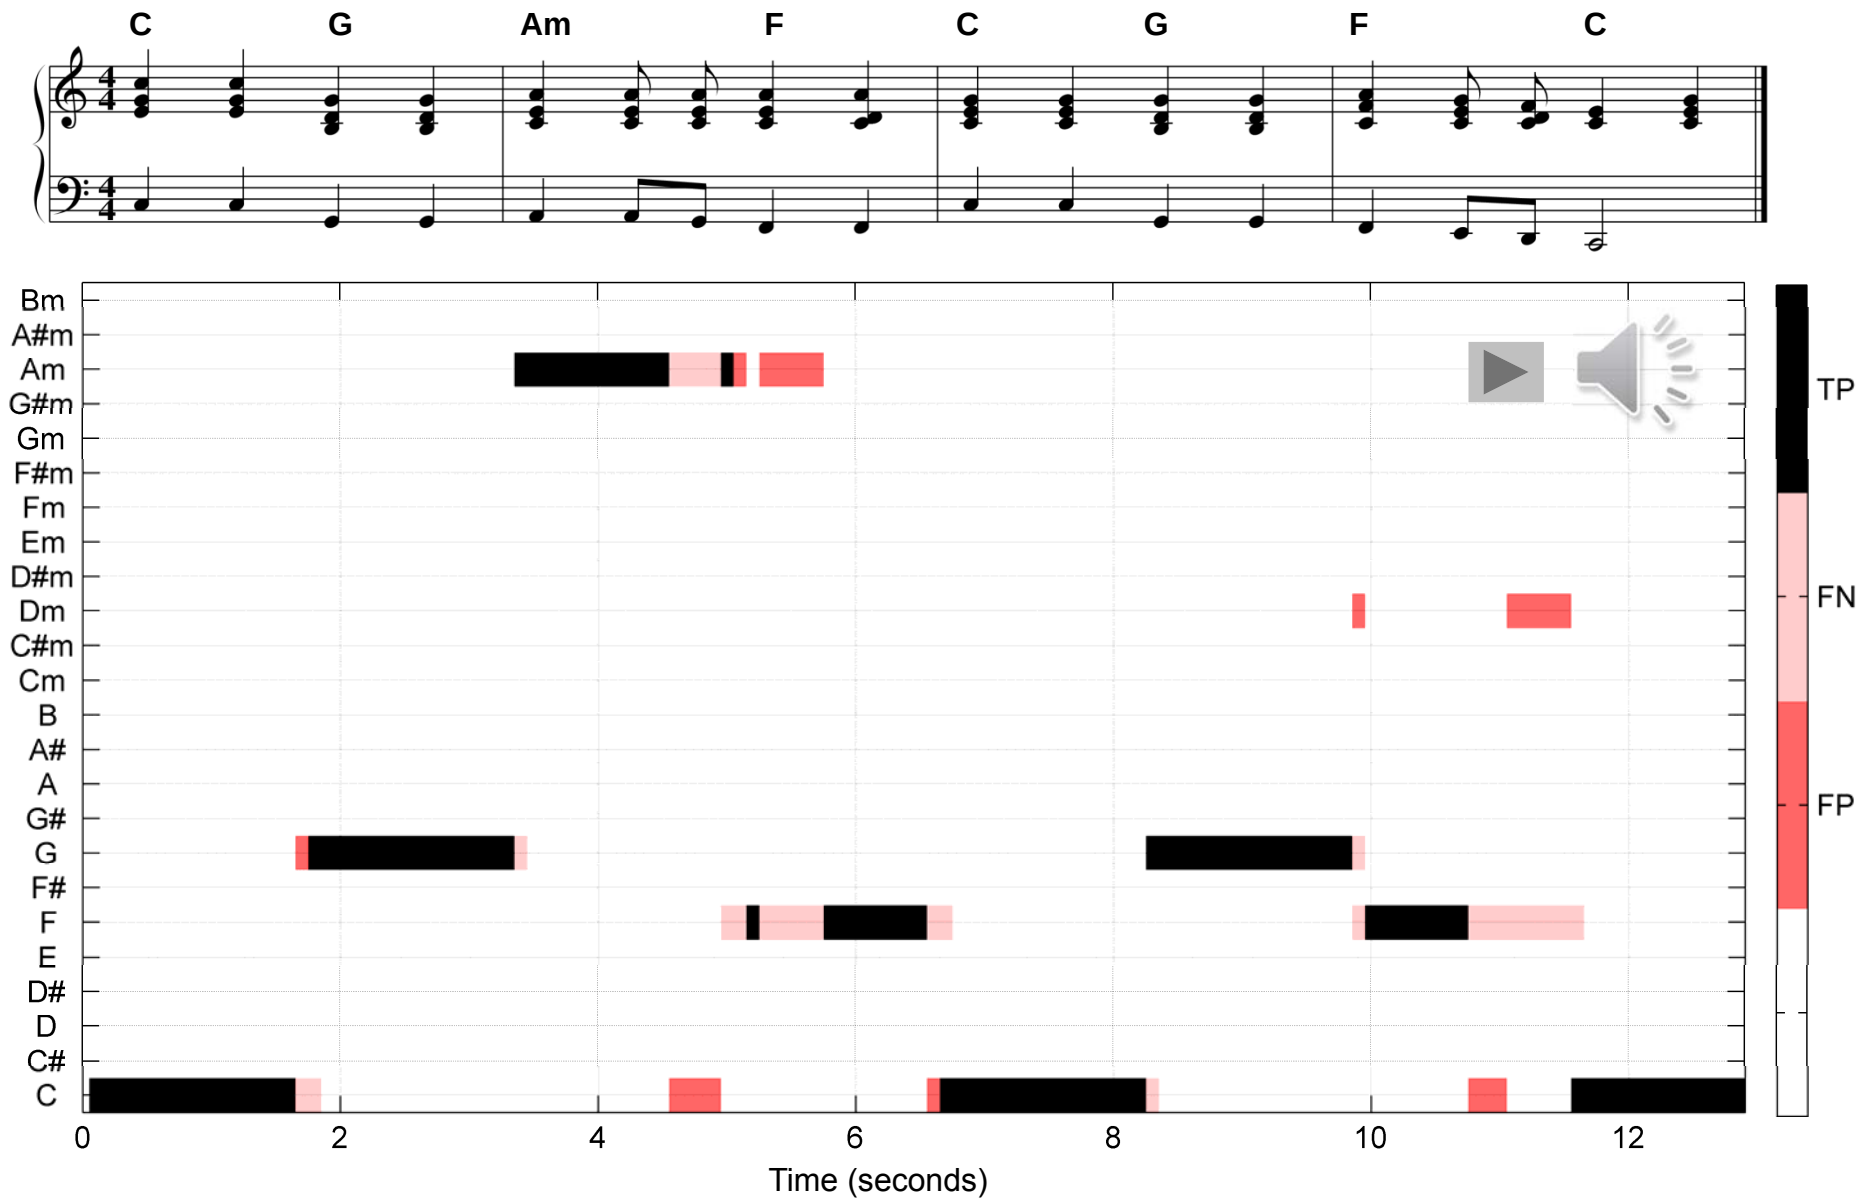
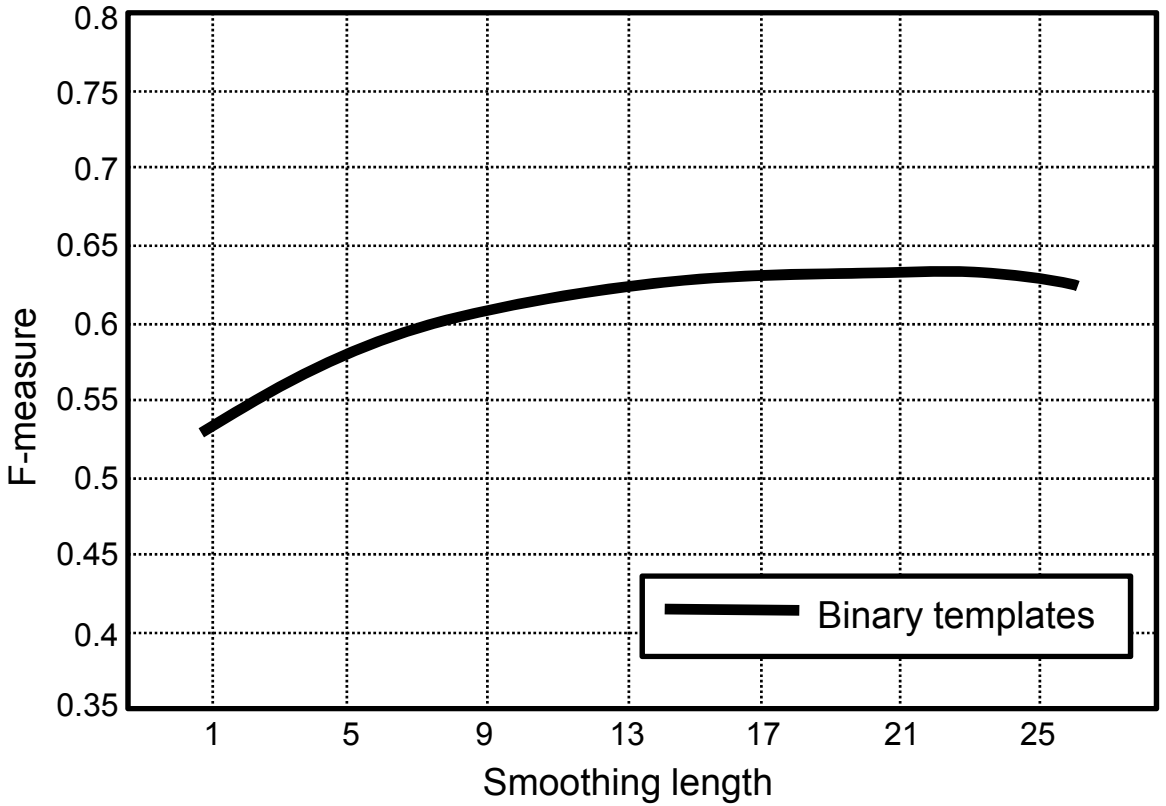
# Chord Recognition: Evaluation



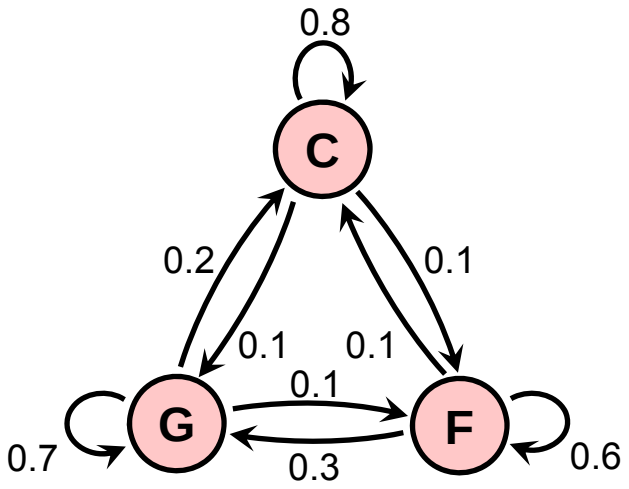
# Chord Recognition: Evaluation

- Frame-wise approach: Too many / too rapid changes of output label
- Improvement strategies:
  - Pre-filtering: Average chroma features over several frames (**smoothing**)
  - Evaluation on all Beatles songs



# Chord Recognition: Markov Chains

- Probabilistic model for sequential data
- Markov property: Next state depends only on current state (no “memory”)
- Consist of:
  - Set of states
  - State transition probabilities
  - *Initial state probabilities*



# Chord Recognition: Hidden Markov Models

- States as **hidden** variables

- Consist of:
  - Set of states (hidden)
  - State transition probabilities

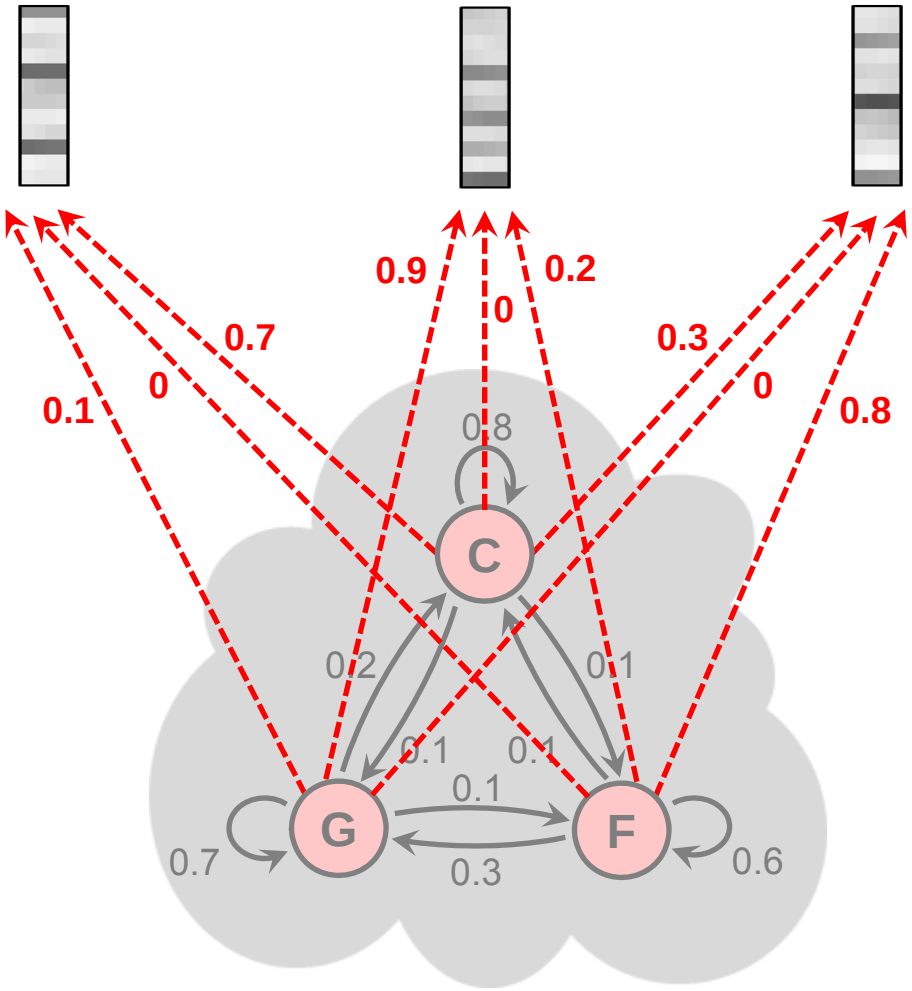
  - Emission probabilities



# Chord Recognition: Hidden Markov Models

- Different algorithmic problems

- **Estimation problem:**
  - Given an observation sequence, determine the *model parameters*
  - „Training“ the HMM on given data
  - Baum-Welch algorithm (Expectation-Maximization)

- **Uncovering problem:**
  - Given the model, find the optimal *hidden state sequence*
  - Use Viterbi algorithm based on dynamic programming
  - Corresponds to chord estimation task!
